1. (Cancelled).

2. (Currently Amended) The collapsible container of claim ~~1~~ 8 wherein the pair of first side ~~wall is~~ walls are moveable from the assembled position to a collapsed position by a force exerted on the first side walls thereby causing the spring portion to flex from the first position to the second position to release the latch member from the clip member and subsequently return to the first position.

3. (Original) The collapsible container of claim 2 wherein the spring portion returns to the first position after the latch member is released from the clip member.

4. (Currently Amended) The collapsible container of claim ~~1~~ 8, wherein the first side ~~wall is~~ walls are pivotable outwardly from the collapsed position on the base to the assembled position.

5. (Currently Amended) The collapsible container of claim ~~1~~ 8 wherein at least one of the first side walls and the second side walls comprises a wall structure having an upper wall portion, the upper wall portion including a plurality of alternating row members extending at least partially across the wall structure proximate an upper surface of the wall structure and oriented substantially parallel thereto, each of the plurality of row members having a first surface and second surface co-planar with an inner and an outer surface, respectively, of the upper wall portion, wherein at least one of the plurality of row members has a peaked first surface and recessed second surface,
